

Tersus UAV PPK Solution with Base

Cost-effective UAV PPK solution

Overview

Tersus UAV PPK solution with Base includes BX306 PPK Receiver, AX3705 Helix Antenna (or AX3703 GNSS Aviation Antenna as another option), David Base Kit Network Mode and Tersus GeoPix Software. BX306 PPK Receiver supports multi-constellations and dual-frequencies. It has in-built 4GB memory (eMMC) for GNSS observation data recoding. Very small and light AX3705 Helix Antenna and AX3703 GNSS Aviation Antenna are designed for UAV applications. David Base Kit Network Mode can work as a base station to record GNSS raw data for post processing, and also as an easy-to-use rover receiver to measure Ground Control Points for photogrammetry.

Tersus GeoPix integrates the functions of GNSS observation post processing, Event Mark interpolation and geotagging in EXIF. By clicking one button after input all necessary data, the software provides the result directly as input for image processing software. Tersus GeoPix is part of Tersus Tool Suite which can be downloaded from Tersus official website.
